One of the big advantages of using this program is the ability to work on multiple editing projects and share the results. In most cases, you'll start by printing your designs on paper, then scanning the images and placing them in Photoshop to make final tweaks, and finally printing the final version. For more in-depth tutorials, and an easy way to navigate them, the Internet is filled with helpful information about the program and its different tools. Program Highlights Photoshop offers a feature-rich, easy-to-learn editing package that is easy to navigate. It uses layers, allowing you to make edits on a blank canvas, with any edits automatically being kept on the same layer until you save the file, at which point the edits are kept on separate

layers. For the most part, you don't even need to specify the name of the layers you are creating, as they are automatically named. From the moment you launch Photoshop, you can learn to use the program, as the menus are clearly and logically labeled, and many Photoshop tutorials include video directions on their website. The most common adjustments you can make with Photoshop include: Image editing: crop, resize, rotate, and skew; levels, dodge and burn, curves, brightness/contrast, and brightness/contrast curves; erasers; whites, blacks, darks, and grays; luma, luminance, and saturation; and color, hue, saturation, and luminance. Painting tools: flood, heal, blend, and clone. Fashions: gradient fill, pattern overlay, effects, and filters. Workflow: optimize, reflow, and transform. Portfolio: exporter, projector, and importer. Navigation: zoom and pan, an option for rotating, zooming and Panoramic stitching and other tools. The Features in Detail

While Photoshop is the industry standard program for image editing, there are better tools out there for some purposes. In general, Photoshop is the best tool for beginning image editing, and many of its features are well suited to beginners. The first thing that you will notice when using Photoshop is that it is a relatively simple program. For the most part, you will go directly to your toolbars, find the menu item you want, and then click or drag it to your desired location on the screen. You can make most edits without opening any dialog boxes.

The following list will run you through all of the basic features that you need to know to edit your images.

1. Focal Point View Layers Focal point is the main part that photographers use in Photoshop or any other graphics editing program. They use it to focus on a part of the photo and enhance it. It is a simple feature that is made by clicking on a part of the photo that you want to be the main subject. You can then change the contrast, saturation, shadows, highlights and brightness of the parts that you have selected.

View Layers View layers is a feature that can change the way you can view the layers in a photo. View layers can be enabled or disabled at any time. This means that you can see all the layers at once but you can remove the layer that you do not need. When you are using layers, it is always best to use them. This will help you to quickly find the layer that you are looking for. You can view and select layers by clicking on the layers icon. The layers icon is a blue square that looks like a photo with little grey lines running through it.

2. Adjustments Hue and Saturation Photoshop has a color picker tool, which can be used to change the color. The tool has four tabs.

- Hue – Changes the colors in the photo to the hues that are seen on the color wheel.
- Saturation – Changes the sharpness of the colors by reducing or increasing the saturation.
- Curves – Changes the shape and color of the color distribution in the photo.
- Shadows and Highlights – Changes the contrast of the colors in the photo in the shadows or in the highlights. The yellow diamond in the picture is the Hue tool, the magenta line is the Saturation tool, the red square is the Curves tool, and the blue triangle is the Shadows and Highlights tool.

Adjustments

Adjustments are one of the most important features of Photoshop. They allow you to change the color, contrast and brightness of the photo. The adjustments window allows you to easily make the changes that you want to the different parts of the image. Q: What is the difference between a day spa and a salon? A: A day spa is a service where you receive a relaxing and uplifting experience in a quiet, secluded environment. A day spa's clientele tend to be the higher income bracket and usually include children. A day spa is a full service event that includes massage, facial, manicure and

pedicure services. A salon, on the other hand, offers a variety of services that are specific to the state of the hair and skin. Depending on the type of salon, a person may receive hair straightening, color, highlights, steam or deep conditioning treatments. Many salons also offer a full service experience including waxing, manicures, facials, and lash extensions. Q: What is the ideal age for someone to get their first facials? A: Most experts in the field agree that the ideal age for getting one's first facial is between the ages of eight to fifteen. Some doctors say it is better to get them at a young age because the skin is still developing at that point in time. You may, however, find that your child or teenager will prefer to wait until they turn older. Their skin will be better able to withstand the rigor of a chemical peel and when the acne has cleared. Q: What should I expect after getting a facial? A: When it is time for your facial, the facialist will begin by cleaning your skin using a gentle cleanser and then apply a mask

What's New In?

The "Transparency" Commission review has become a trick question in the Netherlands. The commission has since Monday released two highly critical reports into the affairs of the three big parties. It accuses all of them of blunders ranging from vote-buying to cover-ups for criminal organizations. Their leaders are being investigated for fraud. Ending the decade-long PS-D66 hegemony, the commission made all three parties co-victims in its assessment of a decade of governing. It singles out the

Netherlands' only female Prime Minister, Mark Rutte, for the most glaring misconduct of all. He is accused of having failed to act on a warning of massive fraud by the country's ruling party ahead of elections in 2015. The commission then criticizes the major coalitions for their inability to present a cohesive center-left front. It concludes with the assertion that the country desperately needs a greater number of parties willing to enter government. The report states that "a large gap remains between the ideals of the center-left and the realities of political governance." So, looking to the future, let's summarize the main points of the 82-page report: 1. The commission considers the governing parties responsible for a lack of transparency in politics. It recommends changing the system, such as forcing parties to present manifestos that are verifiable before elections. But it states that "a more realistic approach would be to make political parties answer for their actions," in a proportional representation system. 2. The coalition government of Rutte's center-right VVD party and PvdA's Labor party is being investigated for the alleged criminal actions of an entrepreneur who offered finance for a party election campaign. The man, Arjan van der Does, reportedly worked for the finance division of the PvdA party before establishing his company. Some of his expenses, which he has denied receiving, were not properly declared as election expenses. 3. The coalition between the Labor and Green parties is accused of favoritism for a public relations firm that was hired to help them acquire parliamentary control. The commission demands that the three parties "have public affairs spokesman to explain to the public why they hired the

firm," Public Relations Company PAI. The trio declined to do so. 4. The commission received extensive data about the key elements in the coalition that it did not have access to in the time it took to prepare the report. It criticizes the parties for failing to release all the data it requested.
